I-SIGN FLEX

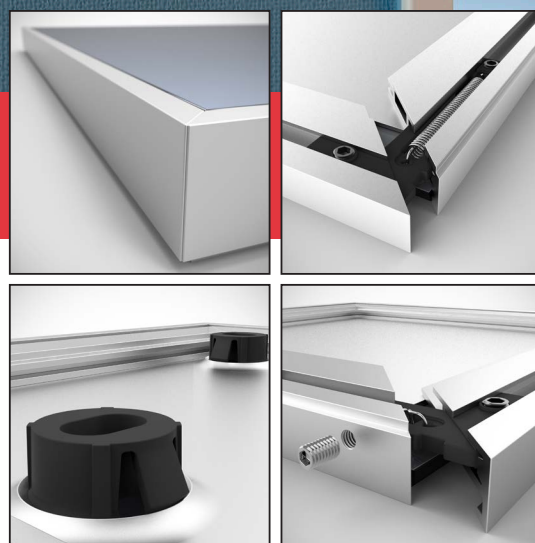

Our flexible sign systems offer the perfect solution for environments where signs and graphics have to be replaced frequently. You can create and update new signs in no time using your printer. You can use paper as well as other materials such as acrylic, metal and engraving plates, or PVC. The flexible signs are deployed as a wall sign, suspended sign, table stand or as a flag mounted model.

Our flexible systems are not only available as a ready-made product in standard sizes (including the most frequently used DIN and sign sizes). They are also available as a profile system with accessories so the sign maker can put together his/her own signs.

I-Sign Flex is an intelligent, modern sign system with a few unique characteristics:

1. The top of the acrylic cover plate is at the same level as the top of the aluminium frame with a visible rim of only 2.5 mm.
2. The I-Sign Flex comes with a spring system; this makes it very easy to remove the acrylic plate and replace the insert.
3. When mounting on a wall you can use double-sided tape or adjustable mount buttons.
4. The I-Sign Flex has a lock function to prevent vandalism.

I-SIGN FIX

The sleek design of the I-Sign range is extended to the I-Sign Fix; observe the elegant frame with invisible fixings.

Sheets of only 2 or 3 mm thick are mounted in the frame with a small, innovative clip. The sheets can be made from various materials: PVC, ACM, acrylic, aluminium, engraving materials, etc. This results in a high degree of personalisation.

I-SIGN DISPLAY

The single-sided I-Sign Display profiles make it possible to frame large panels, digital prints and art virtually without an edge and without visible fixings. This makes them very suitable for use in museums, galleries and interior decoration.

The double-sided profile is extremely suitable for making thin light boxes and illuminated or non-illuminated indoor pillars.

Double-sided tape, magnetic tape or the 3M Dual Lock™ reclosable fastener can be used to affix the panels.

STRATO

STRATO is a flexible and contemporary sign system consisting of a series of soft curved profiles with square sides.

A paper inlay (in the most common DIN formats) can be inserted in the profiles behind a non-reflecting acrylic cover. Other inserts in plastic or metal are of course also possible as well as direct signage or printing on the profiles.

The user can choose between plastic and aluminium end caps for the finish. Recently, a few profiles and end caps were added to the range that ensure that 400 mm, 500 mm and 600 mm wide directories can be produced.

MODULE PLUS INDOOR

A CLASSIC PRODUCT THAT CONTINUES TO DO THE JOB PERFECTLY!

With the Module Plus Indoor, Cosign developed a modular sign system at the beginning of the 1990s that started a new trend within architectural signage and served as an inspiration for many of our colleagues.

The Module Plus Indoor consists of a series of flat aluminium profiles in different widths that has a 15,5 mm and 31 mm module as the basic profiles. The profiles can be "clicked" into place in an easy manner on plastic end caps or clips to create door signs, pictograms, directories, etc. Single-sided signs for wall mounting and double-sided systems for hanging or flag mounting are possible.

The Module Plus Indoor platform does not just offer the sign maker a simple, versatile and flexible standard solution, it also offers space to the creative sign maker to place his or her own emphasis and to develop customised products.

MODULE PLUS OUTDOOR

STYLISH MODULAR OUTDOOR SIGNS

With Module Plus Outdoor, Cosign has developed a modular system for outdoor signs that is often prescribed by architects and designers worldwide and that sign makers like to use because of its versatility and convenience and the option of making unique custom-made signs.

Module Plus Outdoor offers the perfect solution everywhere where a building or location needs to be indicated, a message must be presented or people must be shown the correct place regardless of whether this is for an industrial estate, a company or office building, a hospital, a school, a shopping centre or a car park. Appropriate outdoor signs will also contribute towards strengthening a company's corporate identity.

The Module Plus Outdoor system consists of a series of round, square and ellipse-shaped aluminium poles and text panels (box profiles) with a height of 46 mm, 60 mm, 100 mm, 120 mm, 150 mm, 200 mm and 250 mm. The text panels can be fixed by using special panel clamps. Other innovative accessories ensure that panels can be integrated that are made of different materials in any required size.

TOTEM PYLON

If you take a stroll in most of our shopping malls you will come to realise the popularity of advertising pillars or totems. They have become omnipresent in today's advertising world, where a carefully designed totem contributes to the brand awareness and corporate identity of a company.

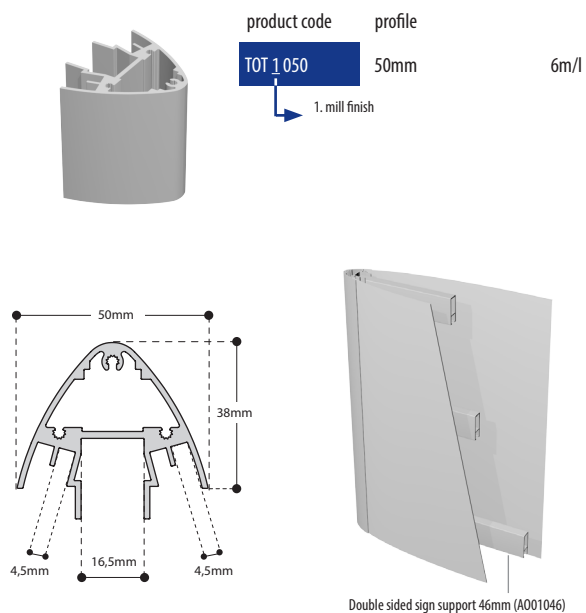

Cosign is an important manufacturer of a range of classic profiles and accessories required for building advertising pillars or totems. From small, elegant indoor totems to large, sturdy structures of up to 6 metres high.

Cosign totems look classy, modern and are constructed from exceptional quality aluminium components. Sign maker can choose from illuminated or non-illuminated elegant, curved or elliptical pillars and depending on the application, location and desired size either a 50mm or 80mm profile is available.
